New muscle takes the floor

New patent pending Coil Saddle takes safety and stability to a whole new level.

Alsip, IL, December 16, 2005: Kastalon, Inc. has blended portability and stability to create the **Coil Saddle**, a revolutionary coil storage device for any application. The deep cradle fits virtually any size coil and takes up minimal floor space. The unique design offers the versatility of using it as a moveable fixture in staging areas or affixed permanently to the storage area floor.

Made of bright safety yellow polyurethane and reinforced steel frames the Coil Saddle surprisingly only weighs 45# and can be easily moved out of the way when not in use, thus avoiding tripping hazards.

With the cost of metal continually increasing, the cost of scrap becomes a greater factor to your profitability. Coil Saddles is your front line weapon in scrap management by protecting surface sensitive metals from floor irregularities and contamination.

Kastalon has been a leader in the design, engineering and manufacturing of high quality, innovative polyurethane parts and products to protect metals. From the time metal is rolled, coated or processed Kastalon roller coverings, mandrel sleeves, filler plates, coil handling pads, fork truck bumpers and coil storage products are in service providing outstanding protection and increasing yields.
