Kastalon Polyurethane Products Achieves ISO 9001:2000 Certification

Apr 18, 2007—Kastalon, Inc has announced that the company successfully passed an extensive ISO 9001:2000 quality systems surveillance audit and received its quality system certification from NSF International System Registration, Inc.

ISO 9001:2000 is a process-based certification that recognizes an organization's ability to incorporate business objectives with operating effectiveness. Companies that achieve Quality Management System certification to ISO 9001:2000 have demonstrated effective implementation of documentation and records management, efficient process control, measurement and analysis of key performance factors and institutionalized continual improvement.

According to Bruce DeMent, President of the 3rd generation family owned company, "This certification was a vital step in meeting our goals as a leader in our industry. In addition to the fully effective practices now implemented by this certification process, we are equally proud to announce that our organization has also integrated a lean manufacturing philosophy to further our efficiencies and ability to meet our customer's expectations."

Since 1967, Kastalon Inc. has been manufacturing the highest quality elastomer products for all industrial applications. Kastalon's years of technical and field experience have earned them worldwide recognition for problem solving and performance enhancement with innovative products and components.

Made in America. For more information, contact Kastalon, Inc at 1-800-KASTLON (1-800-527-8566) or visit www.kastalon.com.
