**Koat-A-Roll.com answers the call**

Already renown in the industry for providing answers to unique material handling situations, Kastalon proudly announces their latest conveying solution by introducing their newest website, [www.koat-a-roll.com](http://www.koat-a-roll.com). This interactive site offers a wealth of information regarding the benefits of polyurethane across the full spectrum of system design and maintenance for conveyor systems. For the designer or maintenance manager looking to enhance their system with more friction, less noise or a non-marking surface, this website provides an easy to use reference.

More than 25 years ago, Kastalon pioneered the “orange sleeve” under the brand name of Koat-A-Roll® for conveyor rollers to enhance the conveyors performance. Best known as a designer, engineer and manufacturer of customized polyurethane products, Kastalon’s use of polyurethane has been expanded into countless applications and components. The superior wear properties of polyurethane lend itself to replace traditional metal parts throughout the system.

Made in America. For more information, contact Kastalon, Inc at 1-800-KASTLON (1-800-527-8566) or visit [www.koat-a-roll.com](http://www.koat-a-roll.com).
